

FLEXSCREEN

CAN YOUR SCREEN DO THIS?

INNOVATIVE

Our revolutionary patented design utilizes a PVC coated, high-performance spring steel frame. Simple and seamless, FlexScreen is the world's first, and only, flexible window screen.

EFFORTLESS

Don't overthink this - it really is that simple! Just bend the sides in, fit the frame into your screen track, and let go. FlexScreen will snap effortlessly into place. Removal is just as easy. Ditto that on cleaning and storage.

NEARLY INDESTRUCTABLE. BARELY VISIBLE.

EVERYTHING YOU WANT A SCREEN TO BE.

DURABLE

We were tired of bent aluminum frames, scratched paint, and broken hardware, so we built a window screen that simply doesn't have any aluminum, paint, or hardware. A screen so durable that it can be thrown from the top of a five-story building without being damaged.

BEAUTIFUL

The FlexScreen frame hides in the window screen pocket, drastically improving sightlines and eliminating the need for color matching. Combined with the superior visibility of our 5 mesh options, FlexScreen is barely visible. Your windows, and your view, will never look better.
